

CFAMM + ADMENSION v12 — Documentation

Single-file ad base + local stats + pool cap + monthly projections + support modal.

1. Pool payout (read first)

Pool payout is proportional and post-revenue only.

$\text{Pool} = \min(\$10,000/\text{month}, \text{received_revenue_this_month} \times 13\%)$

$\text{Your share} = \text{your_units} \div \text{total_units}$

$\text{Your payout} = \text{pool} \times \text{your_share}$

If received revenue is \$0, pool is \$0, and payouts are \$0.

Units are not dollars. Units are used only to compute contribution percentages.

2. Monthly progress bars & projections (conservative)

The Home and Stats pages include a pool progress bar showing pool progress toward the \$10,000 monthly cap.

Stats also shows conservative projections:

- projected sponsored slots sold per month (Admin input)
- sponsor price (Admin sponsor price input, local)
- projected sponsored revenue (slots \times price)
- projected pool (capped; based on received revenue input)

These are planning estimates and never guarantees.

3. Support modal (bottom-left)

The Support button opens an optional support window:

- watch a 30-second sponsor clip (timer)
- share button
- donate panel with TRON/ETH/BTC addresses

No rewards are tied to watching. This is not click-to-earn.

4. Ad safety basics

To reduce ad account risk:

- Do not auto-refresh ads on timers.
- Do not incentivize clicks.
- Refresh/change ad slots only on user intent (navigation/step).
